

MICHAEL ANDERSON

Senior Researcher in Dental Public Health

I am an experienced dental researcher with a specialization in dental public health, boasting over 9 years of experience in this vital area. My research focuses on understanding the social determinants of oral health and their impact on community health outcomes. I have worked extensively on projects that assess the effectiveness of community-based interventions aimed at improving oral health access and education.

WORK EXPERIENCE

Senior Researcher in Dental Public Health 2020-2023
National Institute of Dental Health

- Led research initiatives focused on oral health disparities in underserved populations.
- Analyzed data from community health surveys to inform program development.
- Collaborated with local health departments to implement oral health education programs.
- Published findings in public health journals, influencing policy decisions.
- Presented research outcomes to government agencies and community organizations.
- Supervised a team of research assistants, fostering a collaborative environment.

Research Coordinator 2019-2020
Community Health Research Center

- Coordinated community-based research projects addressing oral health access.
- Conducted interviews and focus groups to gather qualitative data.
- Utilized statistical software to analyze program effectiveness.
- Engaged with stakeholders to promote oral health initiatives.
- Authored grant proposals to secure funding for community health projects.
- Presented findings at national public health conferences.

ACHIEVEMENTS

- Developed a community oral health program that increased access to dental care by 50%.
- Recognized for outstanding contributions to public health research at the National Conference.
- Published 8 articles on public health and oral health disparities.
