

# MICHAEL ANDERSON

## AQUACULTURE HEALTH CONSULTANT

### PROFILE

An experienced Fish Disease Control Specialist with a robust background in environmental science and aquatic animal health. Demonstrates expertise in disease prevention and control, particularly in relation to the impacts of environmental stressors on fish populations. Adept at utilizing data analysis and field research to inform management strategies that enhance fish health and sustainability.

### EXPERIENCE

#### AQUACULTURE HEALTH CONSULTANT

##### Global Fisheries Advisory Group

2016 - Present

- Provided expert consultation on fish health management to aquaculture operations.
- Conducted environmental assessments to identify risk factors for disease outbreaks.
- Designed and implemented biosecurity plans tailored to client needs.
- Facilitated workshops on disease prevention strategies for industry stakeholders.
- Analyzed health data to recommend improvements in production practices.
- Collaborated with researchers to develop best practice guidelines for fish health.

#### RESEARCH SCIENTIST

##### National Aquatic Research Institute

2014 - 2016

- Led research projects focused on the effects of environmental changes on fish health.
- Conducted field studies to assess the prevalence of infectious diseases in wild populations.
- Utilized statistical software to analyze data and publish findings.
- Engaged with local communities to promote sustainable fishing practices.
- Developed educational materials on fish health for public dissemination.
- Collaborated with governmental agencies to inform policy on aquatic health issues.
