

MICHAEL ANDERSON

AQUACULTURE MANAGER

PROFILE

Dynamic Fisheries Management Specialist with a focus on aquaculture and sustainable development. Over 10 years of experience in designing and implementing aquaculture systems that enhance fish production while minimizing environmental impact. Expert in regulatory compliance, environmental assessment, and community outreach. Possesses strong analytical skills to evaluate data and optimize production methods.

EXPERIENCE

AQUACULTURE MANAGER

Blue Ocean Farms

2016 - Present

- Managed daily operations of aquaculture facilities, ensuring optimal production levels.
- Developed biosecurity protocols to prevent disease outbreaks in fish stocks.
- Implemented sustainable feeding practices to reduce environmental impact.
- Conducted regular water quality testing and analysis to maintain optimal conditions.
- Trained staff on best practices in aquaculture management.
- Collaborated with local universities on research projects to enhance production techniques.

FISHERIES TECHNICIAN

State Department of Fish and Wildlife

2014 - 2016

- Assisted in the monitoring of fish populations and habitat conditions across various sites.
- Collected and analyzed biological data to inform management decisions.
- Supported public outreach initiatives to educate communities about sustainable practices.
- Helped develop and implement restoration projects for local fish habitats.
- Participated in stakeholder meetings to gather input on fisheries management strategies.
- Documented findings and prepared reports for regulatory compliance.
