📍 San Francisco, CA

Dedicated Forest Health Specialist with a focus on climate change adaptation and forest resilience. Expertise in evaluating the impacts of climate variability on forest ecosystems and developing adaptive management strategies. Strong proponent of integrating climate science into forest health programs to enhance ecosystem resilience. Proven ability to lead research initiatives that assess vulnerabilities and identify mitigation strategies.

🎓 EDUCATION

Master of Science in Climate Science

University of Colorado
2016-2020

⭐ SKILLS

- Climate adaptation
- Forest resilience
- Research analysis
- Interdisciplinary collaboration
- Policy development
- Community engagement

🗛 LANGUAGES

- English
- Spanish
- French

💼 WORK EXPERIENCE

Climate Adaptation Specialist   2020-2023

International Forest Research Institute

- Conducted research on climate change impacts on forest health and productivity.
- Developed adaptation strategies to enhance forest resilience to climate stressors.
- Collaborated with interdisciplinary teams to address climate-related challenges.
- Facilitated workshops on climate adaptation for forestry professionals.
- Published reports on best practices for climate-smart forestry.
- Engaged with international organizations to promote global forest health initiatives.

Research Fellow   2019-2020

Climate and Forest Research Center

- Assisted in research projects assessing forest responses to climate variability.
- Analyzed data on forest health indicators in relation to climate factors.
- Participated in developing climate adaptation frameworks for forest management.
- Contributed to scientific publications on climate impacts on forests.
- Collaborated with local communities to implement adaptation measures.
- Presented findings at international climate conferences, enhancing visibility in the field.

⭐ ACHIEVEMENTS

- Developed a climate adaptation framework adopted by multiple forest agencies.
- Received recognition for outstanding research contributions to climate forestry.
- Increased awareness of climate impacts on forests through targeted outreach programs.
